

Prof. Dr. Nesrin M. N. El Hadidi is a full time Professor at the Conservation Department; Faculty of Archaeology; Cairo University.

She worked after her graduation as a conservator at the Egyptian Museum in Tahrir for many months, after which she was offered a job at the University, where she taught and trained students for almost ten years practical conservation of organic materials. Since 2003 she has been teaching various courses in Arabic and English in the field of ancient wood working techniques, assessment of wood decay and wood treatment methodologies.

Her ongoing research is on ancient technologies of objects made of wood and plant related materials dating back to different periods during Egyptian history. The assessment of decay and deterioration of wooden and ethnographic objects and methods of their conservation and treatment are a main focus of theses and dissertations under her supervision.
